

## Vision

### Introduction

In the dynamic landscape of social media, Telegram (TG) emerges as a versatile platform for communication and community building. The introduction of customizable betting bots will transform Telegram group chats into interactive hubs, blending gambling, gaming, and financial management within a private or public social setting. This article explores the core features, benefits, and intricacies of gamifying Telegram group chats with betting bots.

### Core Features

Integrating a betting bot into a Telegram group chat enhances user experience and facilitates financial interactions within the community. Key features include:

- Gas-Free Betting:** High Ethereum fees can discourage small wagers. Our solution is gas-free betting, where the only fees incurred are for depositing and withdrawing funds. All betting activities are managed on a database, and the bot uses hot wallets to maintain a balanced deposit-to-withdrawal ratio.
- Mini Games:** The bot supports playing games directly on Telegram. The first mini game, poker, allows participants to buy in, receive chips, and play hands displayed below the chat while the community view the flop, turn, and river. Additional mini games will be introduced in the future.
- Custom Betting:** This bot empowers group owners to create custom bets on various events, including sports, local games, escrow payments, tournaments and much more. Any imaginable bet can be set, turning groups into vibrant centers of community gambling.
- Easy to Use & Telegram Native:** The bot is very easy and intuitive to use. The bot will prompt you the right way in all cases. The bot is also 100% telegram native and first of its kind. There is no external dapp or website needed, everything is done through telegram and private.

### Potential Benefits

Gamifying Telegram group chats with betting bots offers numerous advantages for both users and group owners:

- Enhanced Engagement:** Integrating betting and gaming into Telegram chats significantly boosts member interaction and participation. The potential for rewards adds excitement, encouraging active involvement.
- Community Building:** Shared betting activities foster camaraderie and collective excitement. Whether discussing sports outcomes or competing in games, members bond over shared experiences, strengthening the community.
- Monetization Opportunity:** Betting bots provide novel income generation avenues for group owners and active participants. Managed betting pools and participation fees create potential revenue streams, incentivizing group owners to curate engaging betting experiences.

Additionally, we offer incentives for group owners and a referral program. Group owners receive 20% of all profits made within their groups. The referral program rewards users with 20% of profits from groups they help onboard for life, promoting growth, engagement and passive income for all parties involved (group owner, referring party and \$BETZ).

### Conclusion

The integration of betting bots into Telegram group chats marks a dynamic evolution in online community engagement. By merging gambling, gaming, and financial management, this innovative approach transforms group interactions into immersive, exciting experiences. As these features gain popularity, gamifying Telegram group chats has the potential to redefine social interaction in the digital age.
